

## Flow of Control

- ❖ **Definition:** The sequential execution of statements in a program
  - ◆ **Sequential Control Structure (Top-Bottom)**
    - ◆ It is characterized by a flow chart construct without branches.
  - ◆ **Selection Control Structure (Branching)**
    - ◆ Decision making control
    - ◆ Tests an Assertion Statement
      - ▶ Evaluated as True or False (Humans)
      - ▶ Evaluated as Yes or No (Humans)
      - ▶ Evaluated as 1 or 0 (Computers)

## Relational Operators

- ❖ Relational operators are used to compare two data objects.
- ❖ The result of the comparison is either **true** or **false**.
 

<b>==</b> Equal to	<b>!=</b> Not Equal to
<b>&gt;</b> Greater	<b>&gt;=</b> Greater or Equal
<b>&lt;</b> Less	<b>&lt;=</b> Less or Equal
- ❖ Note the difference between **==** and **=** operator

## Arithmetic Operators Precedence

(Highest to Lowest)

.	Property access of an object
( )	Defines order of operation
- ++ --	Minus, Increment, Decrement
!	Logical NOT Operator
* / %	Multiply, Division, Remainder
+ -	Addition, Subtraction
< <= > >=	} Relational Operators
== !=	
&&	Logical AND Operator
	Logical OR Operator
= += -= *= /= %=	Compound Assignment

## if Selection Control Structure

- ❖ Characterized by a diamond shaped flow chart construct, containing an assertions with two possible outcomes branches (True or False).

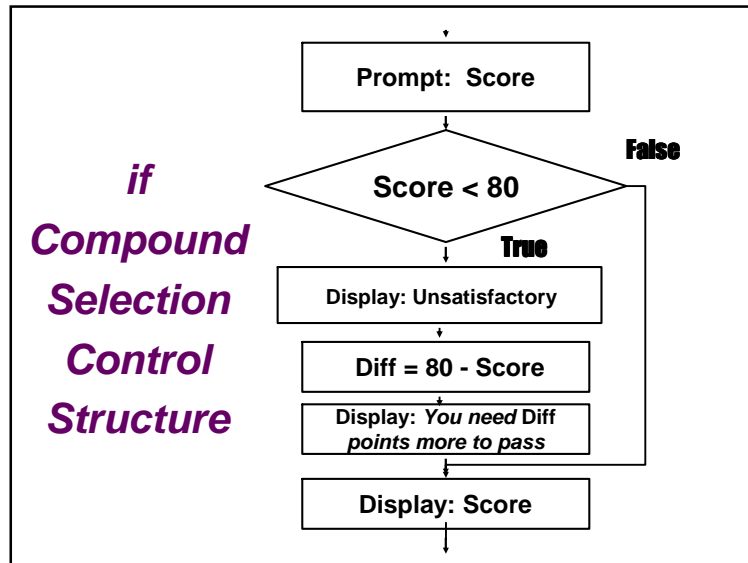

```

graph TD
    A[Prompt: Score] --> B{Score >= 90}
    B -- True --> C[Display: Grade = A]
    B -- False --> D[ ]
    style D fill:none,stroke:none
    
```

```

if( Score >= 90 )
    System.out.println( "Grade = A" );
    
```

```

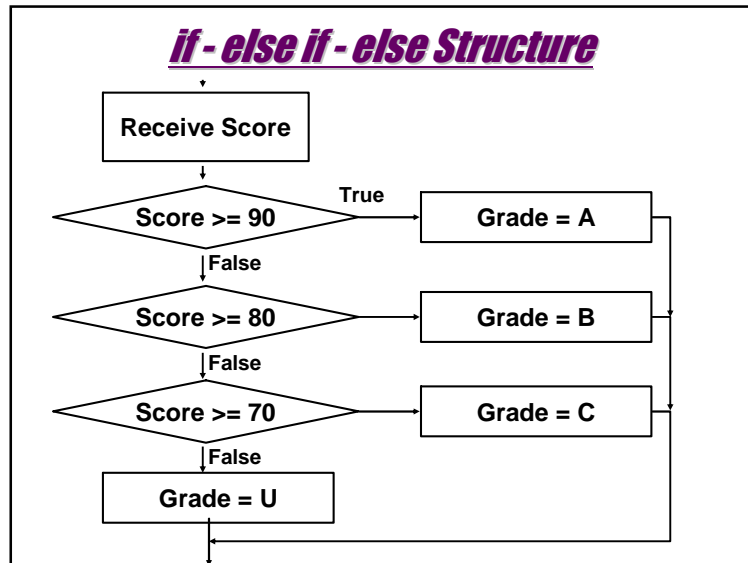

import javax.swing.*;
public class GradePF
{
    public static void main(String args[])
    {
        int nScore, nDiff;
        String sEntry, sOutput = "";

        sEntry = JOptionPane.showInputDialog(null, "Enter Score:");
        nScore = Integer.parseInt(sEntry);
        if(nScore < 80)
        {
            sOutput = "Exam Result Unsatisfactory.";
            nDiff = 80 - nScore;
            sOutput += "\nYou need " + nDiff + " points more to pass.\n";
        }
        sOutput += "Your Exam Score is " + nScore;
        JOptionPane.showMessageDialog(null, sOutput);
        System.exit(0);
    }
}
  
```

```

import javax.swing.*;
public class MileKm
{
    public static void main(String args[])
    {
        double dMile, dKm;
        String sEntry;
        char cSelect;
        sEntry = JOptionPane.showInputDialog(null, "Is input distance miles or km?:");
        cSelect = sEntry.charAt(0);
        if(cSelect == 'm')
        {
            sEntry = JOptionPane.showInputDialog(null, "Enter miles:");
            dMile = Double.parseDouble(sEntry);
            dKm = dMile * 1.609;
            JOptionPane.showMessageDialog(null, dMile + " miles = " + dKm + " km");
        }
        else
        {
            sEntry = JOptionPane.showInputDialog(null, "Enter kilometers:");
            dKm = Double.parseDouble(sEntry);
            dMile = dKm / 1.609;
            JOptionPane.showMessageDialog(null, dKm + " km = " + dMile + " miles");
        }
        System.exit(0);
    }
}
  
```

```

import javax.swing.*;
public class Grade
{
    public static void main(String args[])
    {
        int nScore;
        String sEntry, sOutput;
        char cGrade;
        sEntry = JOptionPane.showInputDialog(null, "Enter Score:");
        nScore = Integer.parseInt(sEntry);
        if(nScore >= 90)
            cGrade = 'A';
        else if(nScore >= 80)
            cGrade = 'B';
        else if(nScore >= 70)
            cGrade = 'C';
        else
            cGrade = 'U';
        sOutput = "For the score = " + nScore
            + "\nYour letter grade is " + cGrade;
        JOptionPane.showMessageDialog(null, sOutput);
        System.exit(0);
    }
}
  
```

- ## Problem Solving Phase
- ❖ Write Program Specifications
    - ◆ Analysis of requirements
    - ◆ Program specifications description
      - ◆ Describe what the goals of the program
      - ◆ Describe appearance of input and output
  - ❖ Algorithm Design
    - ◆ Mathematical Analysis and Algorithm
    - ◆ Flow Chart to describe event sequencing
  - ❖ Verify algorithm
    - ◆ Test with known data
    - ◆ Solve manually
- Copyright © 2006 R.M. Laurie 11

## Algorithm Design - Mathematical

- ❖ Mathematical Description
  - ◆ Boiling point  
F = 212  
C = 100
  - ◆ Freezing point  
F = 32  
C = 0

$$Y = MX + B$$

$$F = (180 / 100) C + 32$$

$$= (9/5) C + 32$$

$$= 1.8 C + 32$$

Copyright © 2006 R.M. Laurie 12

## Verify Algorithm

- ❖ Testing with known data
  - ◆ Boiling point  
F = 212      C = 100
  - ◆ Freezing point  
F = 32      C = 0
  - ◆ Collect Data
    - ◆ Bank thermometer
    - ◆ Radio weather report
- ❖ Solve manually by hand using calculator

Copyright © 2006 R.M. Laurie | 13

## Implementation Phase

- ❖ Translate Algorithm into Code
  - ◆ Create source code file with syntax of JavaScript language and HTML
  - ◆ Run to detect *syntax errors*
- ❖ Test Program
  - ◆ Test with known data
  - ◆ Detects program *logic errors*
  - ◆ Often requires several iterations
  - ◆ May require re-evaluation of specifications and algorithms

## Coding First Is No Shortcut?

The diagram shows a path starting from 'CODE' (with a yellow arrow pointing to it from the word 'Shortcut?') and moving through 'THINKING', 'CODE', 'TEST', 'REVISION', 'DEBUG', and 'REVISION' in a jagged, mountain-like path that eventually leads to a black oval labeled 'GOAL'.

## Conditional Exercises

- ❖ Create program that converts temperatures between Fahrenheit and Celsius
  - ◆ Prompt for which Conversion
  - ◆ Prompt for the temperature
  - ◆ Print code and browser display
- ❖ Create an employee's pay program
  - ◆ Prompt for name, pay rate, and hours
  - ◆ Overtime rate is 1.5x normal pay rate
  - ◆ Subtract 15% withholding tax
  - ◆ Calculate pay check amount
