

## span and div Elements and id Selector

- ❖ `<span class="?">` Inline element with no inherent format
  - ◆ Usually a class attribute is associated with spans to specify similarly formatted inline sections
  - ◆ class attribute allows same format applied to several elements
  - ◆ id attribute could be used to style a single inline element
- ❖ `<div id="?">` Block-level element with no inherent format
  - ◆ Usually an id attribute is associated with div elements to control position and layout for a single occurrence of an element
  - ◆ div element may encapsulate other block level elements
  - ◆ Sometimes referred to as a "super block-level element"
- ❖ **id Selector** used for accessing one element by id
 

```
#dvBack { position:absolute; left: 30px; top: 40px }
#dvNav h5 { font-size: 16pt; color: #990000; }
```

id Selector

h5 Elements contained in div with id dvNav

<p>1</p>
</div>`

## *Measurement Specification*

- ❖ **Absolute Length Measurements**
  - ◆ **12pt** 12 points (1 point = 1/72 inch)
  - ◆ **0.5in** ½ inch
  - ◆ **1.25cm** 1 ¼ centimeters
  - ◆ **16mm** 16 millimeters
- ❖ **Relative Length Measurements**
  - ◆ **152px** 152 pixels
  - ◆ **18em** 18 times the height of uppercase M
  - ◆ **24ex** 24 times the height of lowercase x
  - ◆ **120%** 120 percent of default size
- ❖ **Relative Font Specification**
  - ◆ **xx-small | x-small | medium | large | x-large | xx-large**

Copyright © 2007 R.M. Laurie 5

## *Element Structural Properties*

- ❖ See Appendix B for details
- ❖ **Element Position property**
  - ◆ **position:** [ absolute | fixed | relative ] ;
- ❖ **Element Placement properties**
  - ◆ **top:** 10px; /\* distance browser top to div top \*/
  - ◆ **left:** 20px; /\* distance browser left to div left \*/
- ❖ **Element size properties**
  - ◆ **height:** 400px; /\* height of div element \*/
  - ◆ **width:** 500px; /\* distance browser right to div right \*/
- ❖ **Element display property**
  - ◆ **display:** [ inline | block | list-item | none ] ;

Copyright © 2007 R.M. Laurie 6

## *CSS - Absolute Positioning*

- ❖ **Absolute Positioning** locates the contents of the <div> element to the coordinates specified by the top left properties
- ❖ Can define as inline style
 

```
<div style="position: absolute; right: 0; top: 40px;">
   </div>
```
- ❖ Can define Style Rule for CSS
 

```
#dvSymbol { position: absolute; right: 0; top: 40px; }
```

```
<div id="dvLogo">
  </div>
```

Copyright © 2007 R.M. Laurie 7

## *CSS – Fixed Positioning*

- ❖ **Fixed Positioning** locates the contents of the <div> element to a fixed position in the window that is unaffected by scrolling
  - ◆ Excellent replacement for frame layouts
  - ◆ A W3C Standard and supported by Opera, Mozilla, and Netscape. Unfortunately not supported by IE <=6

```
<style type="text/css">
body { color: #000000; margin: 0; padding: 0;
  background: #FFFF00 url(wpNMCMenu.gif) repeat-y;}
#dvNav { position: fixed; top: 0; left: 0; width: 130px;}
#dvContent { position: absolute; top: 0; left: 150px;
  width: 500px;}
</style>
```

CS 222

Copyright © 2007 R.M. Laurie 8

## CSS –Relative Positioning

- ❖ **Relative Positioning** locates the contents of the <div> element to a relative position from its placement in the natural flow.

```
#dvTop { position: relative; top: -50px; left: -105px; }
```

```
<div id="dvTop">
  <a href="#TOP">
    
  </a> </div>
```

- ◆ W3C CSS Validator checks for valid CSS code
- ◆ SnapFiles Freeware (Excellent freeware source)

Copyright © 2005 R.M. Laurie 9

## Border Properties

- ❖ **Border a colored region surrounding element**
  - ◆ **border-top: 0;** /\* removes top border \*/
  - ◆ **border-right: 10px;**
  - ◆ **border-bottom: 6pt;** /\* border ½ line if 12pt font \*/
  - ◆ **border-left: 20px;**
  - ◆ **border-color: #00FF00;** /\* For bullet lists \*/
  - ◆ **list-style-position: inside;** /\* default outside \*/
  - ◆ **border-style: [dashed | none | solid | dotted | inset];**
  - ◆ **border-bottom-style: dotted;** /\* alternative to <hr /> \*/
  - ◆ **border-width: 4px;**
  - ◆ **border-left-style: double;**
- ❖ **Combined form font properties**
  - ◆ **border: 2px solid #0000CC;**  
*width style color*

Copyright © 2007 R.M. Laurie 10

## Padding Properties

- ❖ See Appendix B for details
- ❖ **Padding** is the transparent region between the border and the element contents
  - ◆ **padding-top: 0;** /\* removes top border \*/
  - ◆ **padding-right: 10px;**
  - ◆ **padding-bottom: 6pt;** /\* border ½ line if 12pt font \*/
  - ◆ **padding-left: 20px;**
  - ◆ **padding: 0 12pt 15px 0;**  
*top right bottom left*
- ❖ **Padding can be problematic** because browsers may interpret box model differently

The diagram illustrates the CSS box model with four concentric layers: an outer green 'Margin' layer, a blue 'Border' layer, a yellow 'Padding' layer, and an inner purple 'Content' layer. Dimension lines indicate 'width' and 'height' for the entire box, and 'left', 'right', 'top', and 'bottom' for the padding and border sections.

Copyright © 2007 R.M. Laurie 11

## Stacking and Overflow Properties

- ❖ **3D Stacking element style**
  - ◆ **z-index: 40;** /\* highest no. = top \*/
  - ◆ **z-index: 20;** /\* lowest no. = bottom \*/
- ❖ **Contents Overflow**
  - ◆ **overflow: [ visible | hidden | scroll | auto ];**  
 /\* determines how overflow displayed \*/

The screenshot shows three overlapping rectangular elements. 'One' is a red box at the top, 'Two' is a green box overlapping 'One', and 'Three' is a blue box overlapping 'Two'. The text inside 'Three' reads 'This is the third element with overflow'.

```
<head> <title> Stacking</title><style type="text/css">
  body { font-family: "Verdana"; font-size: 18px; font-weight: bold; }
  #dVA { border: 5px solid #FF0000; background-color: #FFCC00;
    top:40px; left:40px; position: absolute; z-index: 10;}
  #dVB { border: 5px solid #00FF00; background-color: #CCFFCC;
    top:65px; left:65px; position: absolute; z-index: 5;}
  #dVC { border: 5px solid #0000FF; background-color: #CCCCFF;
    top:90px; left:90px; position: absolute; z-index: 8;
    height: 60px; width: 150px; overflow: auto; } </style> </head>
<body><div id="dVA">One</div> <div id="dVB">Two</div>
<div id="dVC">This is the third element with overflow</div> </body>
```

Copyright © 2007 R.M. Laurie 12

## Floating and Aligning Properties

- ❖ Floating elements in a sea of text
  - ◆ `float: [ left | right ]; /* position element & float text */`
  - ◆ `clear: [ left | right | both]; /* prevents floating */`
- ❖ Vertically Aligning elements
  - ◆ `vertical-align: [ baseline | middle | top | text-top | bottom | text-bottom ];`
- ❖ Rollover Effects
  - ◆ The next slide illustrates floating image to right
  - ◆ Borders are used and colored to as hover rollover

Copyright © 2007 R.M. Laurie 13

## Aligning Multiple Elements Using Class

- ❖ Using a **CSS Class** position properties can be assigned to multiple elements

```
a.rolloverImage img{
border: 3px solid #FFFFFF; float: right;
}
a.rolloverImage:hover img{ border: 3px outset #CCCC99 }
a.rolloverImage:active img{ border: 3px outset #FF9933 }
```

- ❖ Designation of div element class

```
<p> <a href="http://www.mozilla.org/products/firefox/"
title= "&laquo; Get Firefox" class="rolloverImage" >
<img src= "ico-ff.gif" alt="Firefox" width="32"
height="32" /></a>
<a href="http://www.mozilla.org/products/firefox/"
Mozilla Firefox</a> - Mozilla's next generation
browser with extension architecture. 5 MByte
download. </p>
```

## CSS Layout Exercises

- ❖ Utilize the CSS Box Model to design a 2 Dimensional Layout for your web pages that you created on your web site
- ❖ Utilize absolute, relative, and fixed positioning of elements on your web site.
- ❖ Use an Internal style sheet for your home page to control the presentation of the document. This needs to include absolute positioning of elements.
- ❖ For your resume page create a simulated frame layout using a right side vertical navigation bar that utilizes fixed positioning.
- ❖ Create an additional xhtml document that describes the topic you will be covering.
- ❖ Use an external CSS file to control the format for the topic section which requires the use of the link element.
- ❖ Upload all files to your web site using ftp.
